About me

I am a full stack developer working with Python and Vue.js. Previously I focused more on frontend development (React, Angular), but now I'm trying to shift focus more on backend development. Engineering and development is my passion and the thing I like doing most in life. When I join a team I love improving our developer tools, CLIs, and documentation.

In my private life I'm a dad, Elixir enthusiast, die hard OpenBSD user, book geek, and **the** Grateful Dead fan(atic).

Technologies

- Python (MongoDB, Redis), 1 year of production experience
- Node.js (Microservices, photo manipulation), 4 years of production experience
- React (Redux, Mobx), 5 years of production experience

Important experience

JavaScript Team Lead - Infinum (Feb 2019 - Present)

I run a team of eight full time JavaScript developers that work with Angular and React. But I still work on client projects. My most notable project that I'm still working on is:

Python Developer - WB Games New York (Jun 2020 - Present)

I'm working on a product that has an end goal to be an identity provider for all titles released under the WB Games studios. Currently you can see my work in various AAA titles (Mortal Kombat 11, Back 4 Blood, etc.). Technologies I use on day to day basis: Python, MongoDB, Redis, and Vue.js.

JavaScript Developer - Infinum (Dec 2015 - Feb 2019)

I've worked with a various set of clients developing front end solutions in React and Backbone.js. Besides the below mentioned client, worth mentioning is Croatian Post Bank (HPB), Tvrnica Snova, and a few React consulting gigs.

Full stack JavaScript Developer - Image Photo Services (2015 - 2017)

I worked on a number of projects and technologies for a photo sharing service developed for use on Disney Cruise Line and Royal Caribbean Cruise Line. I've used Backbone.js for a kiosk POS type device, SSR React for a cloud photo sharing solution, I helped develop a few Elixir API endpoints, and developed a photo manipulation microservice in Node.js.

JavaScript Lecturer - Infinum Academy (2017 - 2021)

I created and held four one month workshops for students in Zagreb, Croatia, and Ljubljana, Slovenia. In one month time we went from JavaScript basics to simple React apps. But, most importantly the students were given an entryway into the world of JavaScript.

Early experience

Junior Full Stack Developer - Zeraxo (2013 - 2015)

Junior MSSQL DBA - Freelance (2012 - 2013)
